5. What are the possible outcomes of my investment?

There are many possible outcomes associated with an investment in the Fund. Unit Holders can potentially make profit either (i) when the Fund declares and pays out income distributions; or (ii) when the Unit Holder redeems their units in the Fund when the market value of the Fund's portfolio and its NAV per unit increases. However, this also means that the market value of the Fund's portfolio and its NAV per unit may fall and as a result, the Unit Holder may lose part of its capital. Unit Holders should take note that the value of an investment in the Fund and its distribution payable (if any) may go down as well as up and are not guaranteed. Unit Holders should also take note that investment in the Fund involves some degree of risk and that the value of their investment is at risk depending on the underlying investments of the Fund.

KEY RISKS

6. What are the key risks associated with this product?

General Risks

Market Risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.
Liquidity Risk	Liquidity risk refers to the ease of liquidating an asset depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices. Liquidity risk of the Fund is also the ability of the manager to honour redemption requests or to pay Unit Holders' redemption proceeds in a timely manner. The Manager will actively manage the liquidity of the Fund and/or where available, borrow cash and obtain cash financing on a temporary basis as permitted by the relevant laws to manage the Unit Holders' redemption requests.
Inflation Risk	This is the risk that investors' investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.
Manager's Risk	This risk refers to the day-to-day management of the fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by the manager, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.

Credit and Default Risk	Credit risk relates to the creditworthiness of the issuers of the debt instruments/ sukuk and their expected ability to make timely payment of interest/ profit and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the debt instrument/ sukuk. In the case of rated debt instruments/ sukuk, this may lead to a credit downgrade. Default risk relates to the risk that an issuer of a debt instrument/ sukuk either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the debt instruments/ sukuk. This could adversely affect the value of the fund.
Loan Financing Risk	This risk occurs when investors take a loan/ financing to finance their investment. The inherent risk of investing with borrowed money/ financing includes investors being unable to service the loan repayments/ financing payments. In the event units are used as collateral, an investor may be required to top-up the investors' existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower net asset value per unit as compared to the net asset value per unit at the point of purchase towards settling the loan/ financing. Investors who intend to finance an investment in Islamic unit trust fund, or for that matter any Shariah-compliant investment, are advised to seek for Islamic financing to finance their investment.

Specific Risks

Sukuk Issuer Risk	This risk refers to the individual risk of the respective companies issuing the securities. Sukuk issuer risk includes, but is not limited to, changes in consumer taste and demand, legal suits, competitive operating environments, changing industry conditions and mistakes made by the management. If the performance of a company (invested by the Fund) deteriorates, the company's debt securities will decline in value and this in turn may suppress the NAV of the Fund. The deterioration of the performance also will affect the liquidity of sukuk. This risk can be minimised through diversification and by careful selection of sukuk.
Interest Rate Risk	Sukuk prices generally fall when interest rates rise and vice versa. The Fund's NAV may fall when interest rates rise or are expected to rise. This will also have an effect on the valuation of sukuk. This risk could cause the decline of the valuation for the sukuk, and vice versa. To mitigate this risk the Investment Manager will manage the duration of investment in sukuk. In times of rising interest rates, the duration will be shortened and vice versa. The above interest rate is a general indicator that will have an impact on the management of the Fund regardless whether it is an Islamic unit trust fund or otherwise. It does not in any way suggest that the Fund will invest in conventional financial instruments.
Shariah Status Reclassification Risk	This risk refers to the risk of a possibility that the currently held sukuk or Islamic money market instruments or Islamic deposits or Islamic collective investment schemes invested by the Fund may be declared as Shariah non-compliant by the relevant authority or the Shariah Adviser. If this occurs, the Manager will take the necessary steps to dispose of or withdraw such bond or money market instruments or deposits or collective investment schemes.

NOTES: DIFFERENT TYPES OF UNIT TRUST FUNDS CARRY DIFFERENT LEVELS OF RISK. SOME ARE HIGHER IN RISK THAN OTHERS. ASK ABOUT THE RISKS BEFORE INVESTING IN A FUND. MAKE SURE YOU KNOW WHAT YOUR FUND IS INVESTING IN.

13. Portfolio Turnover Ratio

The Portfolio Turnover Ratio (PTR) indicates the frequency of turnover for a particular fund in any given calendar year. It is calculated by taking the average of acquisitions and disposal of securities divided by the average value of the Fund for the year calculated on a daily basis.

Financial Year	2025	2024	2023
PTR (time)	0.30 times	0.31 times	0.39 times

The decrease of PTR for the financial year ended 31 August 2025 was due to Fund Manager less active in trading activities.

Basis of calculation for Portfolio Turnover Ratio

Portfolio Turnover = $\frac{(\text{Total acquisition for the year} + \text{Total disposal for the year})}{2}$
Average value of the Fund for the year calculated on a daily basis

14. Distribution Record

Financial Year	2025	2024	2023
